

## Graduate Software Developer

### Summary

We have an exciting opportunity for a recent Computer Science Graduate.

Working closely with our experienced development team the ideal student should have knowledge within the following areas of software development.

Net development, working on a variety of complex projects.

Ability to work alone as well as in a team on collaborative projects.

Some understanding that working on mission-critical projects under strict time and budget constraints could be useful but not essential.

A working knowledge of relevant technology and languages; with the ability to improve and adapt.

Ability to communicate directly with Customers to resolve issues.

Requirements:

Frontend: jQuery, HTML5, CSS3 and JS, Bootstrap - responsive, mobile-first front-end component library, User Interface and User Experience design experience.

Database:

SQL databases (preferable PostgreSQL)

Backend/framework:

.Net 4.5 framework (latest tool and techniques), ASP.net, C++,  
C#, Visual Studio IDE

Additional:

Cloud solutions, Security, Web servers/provisioning and deployment.
